

## General Guidelines for all TRADING BASED SERVICES members:

*This guidelines are sort of **must to follow rules** for the trader members. If you adhere to them, then you will inculcate the discipline and learn the basics of trading and earn profits continuously. So please read carefully and follow them all.*

*These guidelines are explained by our executive at the time of becoming member, as well as sent via sms and email as well. Still, if anyone has any doubt then they can always calls for explanation.*

1. Please **trade on all days and all messages**. Try not to miss any day of trading calls. (The reason is that some time what happens is that the day you don't trade is exceptionally good; while you choose to trade on 1 day in a week, and that could be a bad for our tips)
2. Memmbers in **any type of FUTURES CALLS** service (such as Nifty Future & Stock Future) must maintain their lot size same, for one month period of subscription. (In case of stock futures, they can determine a value in rupee terms for deciding Daily Uniform Trading Size, For e.g. Rs.2 lac or Rs.5 lac). They can increase their lot size in 2<sup>nd</sup> month, but then maintain that lot size throughout that whole month. For e.g. if you are trading in 2 lot, then trade in 2 lots for the whole month; but you can start trading in 4 lots from 2<sup>nd</sup> month, but keep in mind then you would have to maintain that 2 lot trading throughout the whole month. (The reason of this **uniform quantity rule** is-to avoid the situation of less profit and high losses due trading in different quantity of lots every day.)

3. Trade in **DOUBLE QUANTITY** when specifically written in message. Because we will send such message when we are more confident, and in such trades you can earn good, low risk profits. For. e.g if you normally trade in 1 Lac Rs. Of value, then in double quantity sms, you should trade in 2 lac Rs. of volume.
4. Similarly, trade with **HALF QUANTITY** when it is specifically said so in message. For e.g. in the above case, when we send 'trade in half quantity' sms, then trade in Rs.50,000 Rs.volume on that tip and not 1 lac Rs..
5. Members of **FII STOCKS CALLS** are requested to allocate only *1/4<sup>th</sup> of their capital on one stock*, as we may give maximum 4 standing position at any one time.
6. Strictly follow the **ENTRY, EXIT, STOPLOSS, TRAILING STOPLOSS, PROFIT BOOKING, ABOVE/BELOW/BETWEEN TRIGGER LEVELS.**
7. **IF 2 TARGETS ARE GIVEN** then exit 50% quantity at 1st tgt and hold rest of 50% quantity with same SL or trailing SL if any given.
8. Members in **SURESHOT CALLS PACKAGES (Both Stock Cash & Stock Future Sureshot)** are given the quantity of trade along with the buy sms. Thus, they do not have any discretion in deciding their own quantity of trade for this service. All other general/common guidelines shall apply as they are.
9. **Self Responsibility for Force-Trading:** When at times of both side high volatility and extreme uncertainty, *we are not sending any sms and even then you trade on your own risk, then you will be solely responsible for losses incurred; and not us.*
10. **Extension of Service** if messages are not sent for any duration for any reason including above.

11. **Not Features:** These are guidelines and not features. For reading features of different services, please go to separate pages of different services by going on the main page of Services for Traders.

### COMPULSORY GUIDELINES FOR Successful TRADING IN INTRADAY NIFTY FUTURE

1. Trade in Even lot sizes, i.e. 2 lots, 4 lots, 6 lots etc. as we assume to have 2 targets in most/all calls.
2. Trade with Advanced Limits placed OR Remain in front of the market screen.
3. Trade Daily. Try not to lose any trading day.
4. Trade with Uniform Quantity continuously for at least 1 Expiry.
5. Strictly follow levels.
6. Exit 50% at TP1, and rest 50% at TP2.
7. Make your Entry Price as your Trailing SL, for the rest 50% position, after TP1 is met.
8. The TRADING LEVELS will apply throughout the day, unless otherwise stated.
9. Usually our SL will be Only 10pts, and TP1 20 pts, and TP2 40 pts. Otherwise, it will depend on the volatility of nifty future.
10. You will receive UPDATES, STATUS, ALERT, INFORMATION, msges during the day.
11. At 3.30 pm, you will receive the gross, and net profit in points for the day.
12. VOLATILITY is good for us, but not VERY HIGH/VERY LOW VOLATILITY.

13. If there are any open/un-squared off position nearing the end of the market hours then such position will be exited/squared off at 03.25 pm and nf price running at that time shall be counted for that day's total profit/loss in pts.
14. The levels, if any will stand cancelled automatically, at 03.15 pm; unless otherwise specifically stated. Meaning thereby no new trades shall be placed after this time.
15. You can put trade within 1 points range of the above/below level. E.g if the msg is to buy above 5000, then you can put buy limit at 5001. We will consider the call triggered as soon as any trade is shown executed in the market at the trigger level of 5000. The logic behind is that the call-type is above-below so placing trade one point above/below increases our confidence in efficiency of call and our entry point as well, as we are not entering at 'at' abv/below level, which will be wrong. Also placing trade only 1 point abv/blw and not 2-3 point will save our profit of those 2-3 points while netting the profit in points. Third logic is chance logic. Sometimes the level is not very efficient or market is not trading properly then the nf may trade 'at' the above-trigger level (in this example, nf will trade at 5000, but not go above it and will not execute trades put in the system at 5001). And then if the nf hits stoploss level, then the trader is spared of the loss. However, we will consider stoploss into our net points calculation once the nf has traded 'at' given above/below level, even if it has not risen/fallen 1 point (the actual trade execution level) from the abv/below level. So, this is also a plus for the traders.

16. Abbreviations/Shortforms-

Nf=nifty future

SL=stoploss

tp= target price

Tp1=target price 1

Tp2=target price 2

Abv=above

Below=below

Met=hit/achieved

Btw=between

Cmp=current market price

Choppy= trading up and down within small range (e.g 40 points or less) in which it is difficult to put meaningful trade with 10 point stoploss and 20 point target as price is moving both sides and that too in a tight high-low.

**Discipline is the key to Professional trading !**
